Sense3D Scanner User Manual

● Machine Operation Procedure :

1. Connect Sense3D to the computer.
2. Open the 3D Systems Sense program from the computer and wait for the program to detect the scanner.
3. Enter password: 5946.
4. Take out the black turntable and place the object to be scanned in the center of it.
5. Hold the scanner, align the lens with the object to be scanned, and press the scan button when the screen displays a green frame. And then slowly rotate the turntable until all surfaces have been scanned.
6. Click 'finish' and save the file.

● NOTICE :

1. If the computer doesn't connect with Sense 3D Scanner, try reconnecting the cable again.
2. Due to the fact that complex background and reflections from surrounding objects can easily interfere with the scanning result, it is recommended to scan with a clear background. Additionally, if the scanning object is black, then the black turntable would not be suitable.
